

Install Your Red.One Configuration Profile

Follow these steps immediately after opening the Red.One profile link.

● **IMPORTANT:** Install the profile within 8 minutes of downloading it.

INSTALLATION STEPS

1

Open the profile link

Open the Red.One link in Safari. Tap Allow if asked to download a configuration profile.

2

Open Settings

Return to the Home Screen and open the Settings app immediately after the download.

3

Tap Profile Downloaded

Look near the top of Settings. If it is not shown, go to General > VPN & Device Management and select the profile.

4

Install the profile

Tap Install in the upper-right corner. Enter the iPhone passcode, review the profile, and confirm Install again.

5

Finish and verify

Tap Done. Under VPN & Device Management, confirm that the correct Red.One profile appears as installed.

WHAT TO LOOK FOR

In Settings

Tap the Profile Downloaded row.

Settings

Profile Downloaded

Before you finish

- Only one downloaded profile can wait for installation at a time. If the profile disappears, reopen the Red.One link and download it again.
- Only install the expected Red.One profile. Stop if the profile name or signer looks unfamiliar.
- Stolen Device Protection may block installation away from a familiar location. Follow the iPhone prompt and re-enable it after installation.
